

Seeking to Add Income and Growth, While Emphasizing Downside Protection

Morningstar Rating

★★★

3-Star Overall Morningstar Rating™ as of 03/31/17 out of 75 Option Writing Funds

The Overall Morningstar Rating™ for a fund is derived from a weighted average of the fund's three-, five- and ten-year (if applicable) Morningstar Ratings™ metrics, which are based on risk-adjusted return performance.

Institutional Class Facts

Ticker	MDEIX
Cusip	89834E633
Inception Date	6/28/2013

Weighted Avg. P/E '18 est.	11.7x
2018 EPS Growth Rate	17.1%
30 Day SEC Yield	2.19%
30 Day SEC Yield - Unsub.	1.85%
Dividend Yield	2.84%

EPS Growth is not a measure of the Fund's future performance.

Why Invest in the M.D. Sass Equity Income Plus Fund?

We seek to provide:

- Positive absolute returns over time by focusing on liquidity and risk-control
- Equity participation with the potential for increased downside protection from option hedging strategies
- Yield or income with low interest rate sensitivity

Investment Goals

- Seek to generate high income from dividends plus covered call option proceeds
- Supplement potential income generation with capital appreciation
- Emphasize downside protection and low volatility through stock selection, covered call option proceeds and index puts purchases

Investment Strategy

- Invest in a portfolio of 25-50 rigorously researched, dividend-paying stocks we believe are undervalued and likely to grow their dividends at above-average rates
- Seek to enhance equity returns by writing (selling) out of the money covered call options tailored to the fundamentals of each position, with exercise prices generally above the current market prices of those stocks at the time of the call sale
- Seek to protect capital against significant equity market declines by buying out of the money index put options

Quarterly Commentary

- The M.D. Sass Equity Income Plus Fund ("MDEIX") increased 3.26% in 1Q17.
- During the quarter, MDEIX's top performing stock/call positions were: 1) NRG Energy Inc (NRG), 2) Apollo Global Management LLC (APO), and 3) NRG Yield-C (NYLD), while the primary stock/call detractors were: 1) Kroger Co (KR), 2) EQT Corporation (EQT), and 3) Gilead Sciences INC (GILD).
- At the end of the quarter, MDEIX had a beta and delta-adjusted net exposure of 48%, the lower end of our target range of 40%-70%, positioning the portfolio more defensively as the market rose post the election and volatility decreased.
- We are confident in the prospects of our stock portfolio given what we believe to be the strong fundamentals of a higher dividend yield than the S&P 500 (2.84% annual dividend yield vs. 1.75% for the S&P 500), faster potential earnings growth (2018 Projected EPS Growth of 17.08% vs. 9.38%), and cheaper valuations with a 11.7x P/E vs. 16.9x for the S&P.

B.A., Economics from the University of Michigan, an M.B.A. from New York University, and is a CFA charterholder.

Important Disclosures

The composition of the asset allocation, Fund holdings and sector allocations are subject to change at any time and are not recommendations to buy or sell any security. Cash and Equivalents includes Other Assets in excess of Liabilities.

Weighted Average Market Capitalization: The weighted average market cap is the average market capitalization of all companies in a fund - with each company weighted according to its percent held in the fund. **Dividend Yield:** A financial ratio that shows how much a company pays out in dividends each year relative to its share price. In the absence of any capital gains, the dividend yield is the return on investment for a stock. **Cash Flow:** Includes return of principal and interest payments. **The Price to Earnings (P/E) Ratio:** is calculated by dividing current price of the stock by the company's trailing 12 months' earnings per share. **Standard Deviation:** A statistical measure of the historical volatility of a mutual fund or portfolio, usually computed using 36 monthly returns. **S&P 500 Index:** The S&P 500 Index is a market-value weighted index consisting of 500 stocks chosen for market size, liquidity, and industry group representation. **CBOE S&P 500 BuyWrite Index's (BXW):** The CBOE S&P 500 BuyWrite Index (BXW) is a benchmark index designed to track the performance of a hypothetical buy-write strategy on the S&P 500 Index. **Morningstar Option Writing Category:** The Morningstar Option Writing Category includes covered call strategies, put writing strategies, as well as options strategies that target returns primarily from contract premiums. In addition, option writing funds may seek to generate a portion of their returns, either indirectly or directly, from the volatility risk premium associated with options trading strategies. **CBOE Volatility Index:** A measure of implied volatility in the stock market that is calculated on the basis of short-term index options on the S&P 500 Index. A high VIX index signals anxiety and fear in the market and typically occurs after a sharp decline in stock prices. A low VIX index generally follows calm markets and rising prices. It is not possible to invest directly in an unmanaged index. **Beta:** A statistic that measures the volatility of the fund, as compared to the overall market. **Delta Adjusted** notional value is used to show the value of an option. You can calculate the delta adjusted notional value of a portfolio by adding the options' weighted deltas together.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The M.D. Sass Equity Income Plus Fund was rated against the following numbers of Option Writing Funds over the following time periods: 75 funds in the last three years. With respect to these Option Writing Funds, M.D. Sass Equity Income Plus Fund received a Morningstar Rating of 3-stars for the three-year period. The rating is specific to Institutional Share Class and does not apply to other share classes of the Fund.

This Fact sheet must be preceded or accompanied by a prospectus.

The M.D. Sass Equity Income Plus Fund invests in a limited number of companies. Therefore, changes in the value of a single security may have a more significant effect on the value of the Fund's portfolio than for other funds that invest in a greater number of companies. The Fund invests in mid-cap companies, which involves additional risks such as limited liquidity and greater volatility than large capitalization companies. The Fund invests in options, which may be more volatile than investments directly in the underlying securities, involve additional costs and may involve a small initial investment relative to the risk assumed. When the Fund writes a call option, its ability to participate in the capital appreciation of the underlying obligation is limited. There is no assurance that a closing transaction on a call option can be effected at a favorable price. During the option period, the covered call writer has, in return for the premium received, given up the opportunity for capital appreciation above the exercise price should the market price of the underlying security increase, but has retained the risk of loss should the price of the underlying security decline. If the Fund has purchased an index option and exercises it before the closing index value for that day is available, it runs the risk that the level of the underlying index may subsequently change. If such a change causes the exercised option to fall out-of-the-money, the Fund will be required to pay the difference between the closing index value and the exercise price of the option (times the applicable multiplier) to the assigned writer. If an index put option purchased by the Fund were permitted to expire without being exercised, its premium would represent a loss realized by the Fund. When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of the other investment company's or ETF's operating expenses, including the potential duplication of management fees. The risk of owning an ETF generally reflects the risks of owning the underlying investments the ETF holds.

Absolute return are not intended to outperform stocks and bonds during strong market rallies. The Fund is distributed by Quasar Distributors, LLC.
