

M.D. Sass Short Term U.S. Government Agency Income Fund (MDSIX)

September 30, 2018

Seeking to Add Value and Income While Identifying, Measuring and Controlling Risk

Investment Goals

- High interest income
- Preserving capital in adverse markets
- Capital growth, when and as opportunities are available
- Provide a value-added, short-term fixed income solution

Who is the M.D. Sass Short Term U.S. Government Agency Income Fund Designed For?

- Pension funds, corporate investors, endowments/foundations, insurance companies, banks and other financial institutions, and individuals seeking yield and high quality short-term investments.

Quarterly Commentary

- Since inception, the Fund has produced a cumulative return of +7.78% vs. the +4.31% return of the BofA/Merrill Lynch 1-3 Year U.S. Treasury Index. For the most recent quarter, MDSIX returned +0.05% vs. the 1-3 Year U.S. Treasury Index return of +0.20%.
- Treasury yields rose significantly across the term structure during the quarter, with the negative price return offset by higher interest income and spread tightening of non-Treasury fixed income sectors. While it was expected that the Federal Open Market Committee (FOMC) would increase its target Fed Funds rate to 2%-2.25% on September 26th from historically low levels to normalize monetary policy, markets sense a shift in Fed policy after Fed Chairman Powell's statement that "We may go past neutral, but we're a long way from neutral at this point", suggesting the Fed risks overkill by hiking short term rates above 3%, rather than pause rate hikes at around 2.5% as many had expected.
- 2Q18 real GDP growth accelerated to +4.2% quarter over quarter and +2.9% year over year, spurred by tax reform, deregulation, stronger credit growth and a declining savings rate. In the face of accelerating GDP growth, inflation has increased but not sharply, as it remains constrained by intense competition, globalization and technology. The FOMC sees 2.25% as a ceiling on core Personal Consumption Expenditures. During the quarter, rising geopolitical risks weighed on investor sentiment, including intensifying U.S. - China trade tensions, uncertainty around the Italian budget and the UK's exit from the European Union, and oil prices reaching levels not seen since 2014.
- In April the Fed began publishing the Secured Overnight Financing Rate (SOFR), marking a first step toward replacing LIBOR as the short term interest rate benchmark. SOFR is an overnight rate based on Treasury repo with underlying daily transaction volume of approximately \$800bn. Over the last couple of months, the markets have witnessed the launching of SOFR futures, SOFR-linked derivatives, and the first generation of SOFR benchmark linked agency/corporate securities.
- Our base case assumption is that rates should continue to drift upward modestly and incrementally, implying slower prepayment rates and boosting the income potential of high quality securities such as Agency MBS. As a specialist within the U.S. Agency MBS space, our universe of available products encompasses all agency products including both residential and multifamily loans. We believe MDSIX's focus on agency MBS securities provides a meaningful cushion in the face of further interest rates moves and market volatility.

Morningstar Rating

★★★★

4-Star Overall Morningstar Rating™ as of 09/30/18 out of 102 Short-Term Government Funds

The Overall Morningstar Rating™ for a fund is derived from a weighted average of the fund's three-, five- and ten-year (if applicable) Morningstar Ratings™ metrics, which are based on risk-adjusted return performance.

M.D. Sass Short Term U.S. Government Agency Income Fund (MDSIX)

September 30, 2018

Seeking to Add Value and Income While Identifying, Measuring and Controlling Risk

Why Invest in the M.D. Sass Short Term U.S. Government Agency Income Fund?

- Targets 100% U.S. Government and U.S. Government Agency-Backed securities
- M.D. Sass seeks the highest yield available from 1 to 3 year duration U.S. Government Agency securities
- We endeavor to reduce interest rate risk by always maintaining a 1 to 3 year duration and avoiding interest rate bets
- M.D. Sass only selects highly liquid U.S. Government and U.S. Government Agency-Backed securities with highly quantifiable and stable cash flows
- We combine selected securities into a rigorously stressed tested value-added portfolio
- M.D. Sass stress tests the portfolio under extreme adverse economic and market conditions seeking to identify, measure and control risks

Investment Strategy

- We invest in the U.S. Government Agency-Mortgage Backed securities market, which exceeds \$5 trillion, ranging in duration from less than 1 year to 30 years
- M.D. Sass rigorously analyzes securities in the 1 to 3 year duration range and carefully selects those with the highest yield and appreciation potential from among only those that have very stable cash flows
- In addition to the U.S. Government Agency guarantee, we focus on securities that we believe are composed of underlying mortgages that are very high quality even without the U.S. Government Agency guarantee because the underlying borrowers have very favorable FICO scores and the mortgages have low loan-to-value ratios, small average loan sizes, desirable geographies, broad diversification, and are offered at attractive yields
- M.D. Sass frequently sells securities when and as they become fairly valued and we add value by re-investing the proceeds into undervalued similar securities

Portfolio Managers

The M.D. Sass Short Term U.S. Government Agency Income Fund is managed by M.D. Sass Investors Services, Inc. M.D. Sass has managed similar portfolios for institutional and ultra high net worth investors for more than 20 years having prospered through numerous interest rate and credit cycles. Please refer to the prospectus for the historical results of these similar portfolios.

Important Disclosures

The composition of the fund holdings and asset allocation are subject to change and are not recommendations to buy or sell any securities. Cash and Equivalents includes Other Assets in excess of Liabilities.

Basis Point: Is a common unit of measure for interest rates and other percentages in finance. One basis point is equal to 1/100th of 1%, or 0.01% (0.0001), and is used to denote the percentage change in a financial instrument. **Cash Flow:** Includes return of principal and interest payments. **Sharpe ratio:** Sharpe is calculated by subtracting the risk-free rate, such as that of the 3 month U.S. Treasury bill from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns. **Correlation:** A correlation coefficient is a measure of the interdependence of two random variables that ranges in value from -1 to +1, indicating perfect negative correlation at -1, absence of correlation at zero, and perfect positive correlation at +1. **Weighted Average Coupon:** Market value weighted average of coupon rate of portfolio holdings. **Effective Duration:** A duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. **Weighted Average Maturity:** The average of the stated maturity dates of the fixed-income securities held in the fund. **BoFA/Merrill Lynch 1-3 Year Treasury Index:** The BoFA Merrill Lynch 1-3 US Year Treasury Index is an unmanaged index that tracks the performance of the direct sovereign debt of the U.S. Government having a maturity of at least one year and less than three years. It is not possible to invest directly in an unmanaged index. **Morningstar Short Government Category:** The Morningstar Short Government Category represents a universe of funds with similar objectives. **Barclays U.S. Aggregate Bond Index:** The Barclays U.S. Aggregate Bond Index covers the U.S. denominated, investment-grade, fixed-rate, taxable bond market of SEC-registered securities with maturities of greater than one year. The index includes bonds from the Treasury, Government-Related, Corporate, MBS, ABS, and CMBS sectors. **Consumer Price Index (CPI):** A measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food and medical care. One can not invest directly in an index. **Fed Funds Rate:** Fed Funds Rate is the interest rate at which depository institutions (banks and credit unions) lend reserve balances to other depository institutions overnight, on an uncollateralized basis. **LIBOR:** London Interbank Offered Rate is a benchmark rate that some of the world's leading banks charge each other for short-term loans.

The information contained herein: (1) is proprietary to Morningstar; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. As of 09/30/18 the MD Sass Short Term U.S. Government Agency Bond Fund was rated 5-Stars and 4-Stars for the three year and five year time periods out of 102 and 93 Short Term Government Funds, respectively.

This Fact sheet must be preceded or accompanied by a prospectus.

Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise.

This risk is usually greater for longer-term debt securities. However, this fund only intends to invest in 1 to 3 year duration securities.

Investments in U.S. Agency Mortgage Backed Securities include additional risks that investors should be aware of such as prepayment risk, extension risk, and possible illiquidity.

Prior to September 28, 2015, the Fund's name was M.D. Sass 1-3 Year Duration U.S. Agency Bond Fund.

The Fund is distributed by Quasar Distributors, LLC.
